

# PDF Viewer

## What is PDF Viewer?

PDF Viewer is a web component that is easy to use. The only thing you need is the javascript code, and then you are ready to use it in your webpage like in this following example:

```
<html>
<head>
  <script type="module" src="main.bundle.js"></script>
</head>
<body>
  <pdf-viewer src="nif.pdf" page="1" rotation="0" scale="1.0"></pdf-viewer>
</body>
</html>
```

This is all you have to do to display a PDF file. This simple view however will not enable any functionality like browsing or scaling, but the component has built-in functions for this to enable anyone to make their own tool buttons.
